

Request for PUBLISHED OR GREY LITERATURE: **Impact of COVID-19 on mental health and well-being of caregivers and families of autistic people**

Reports have indicated that caregivers and families of autistic people have experienced considerable stress as a result of the COVID-19 pandemic.

We are conducting a **rapid synthesis of the literature** to help us understand what has been documented regarding the impact of COVID-19 on the mental health and well-being of caregivers and families, and to identify supportive programs that have emerged as a result.

We are asking service providers, researchers, clinicians, and members of the autism community to help us identify key **literature (i.e., publications, reports, guidelines, newspaper articles)** that refers to the mental health or well-being of caregivers and families of autistic people during the pandemic. Please email us with details so we can include the resource in our review.

Please email **Vivian Lee** at leev9@yorku.ca by **June 12 2020**
